## DETAILED ACTION

### *Specification*

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 1-10 rejected under 35 U.S.C. 103(a) as being unpatentable over Kunikiyo Patent Number 6333232.

Kunikiyo discloses:

(See col. 21 lines 63-65; col. 29 lines 20-22; col. 30 lines 1-15, 23-26, 35-50)

Forming a bird's beak in a step of forming a trench for an STI structure in a semiconductor substrate. In the example shown in FIG. 45, a silicon nitride film (4) as well as a polysilicon film (3) are selectively removed by etching and thereafter fluoride

Art Unit: 2812

ions (40) are implanted at oblique incident angle of 0 degrees to 38 degrees. It is known that accelerated oxidation is caused when implanting fluorine into silicon for oxidation.

Kunikiyo further discloses, a HDP (high density plasma) filler of a STI fluoride implanted liner layer.

(See col. 3 lines 47-49)

Therefore it would have been obvious for one skilled in the art at the time of the invention with the teachings of the Kunikiyo reference to make conductive the liner layer through fluoride ion implantation thereby reducing negative temperature bias.

### *Conclusion*

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stanetta D. Isaac whose telephone number is 703-308-5871. The examiner can normally be reached on Monday-Friday 7:30am -5:30pm.
